## Overview

---

Can solar energy be used in railway infrastructure?

As a result, integrating renewable energy sources such as solar energy with railway infrastructure can optimize the sector's energy structure and further enhance the critical role of HSRs in sustainable development.

How many solar panels are installed at Xiong'an railway station?

For example, the installed PV capacity at the Xiong'an Railway Station is just 6000 kW. The Beijingnan Railway Station, the first large-scale railway station in China to use solar power, is also underexploited in terms of its PV potential. This station has installed 3264 solar panels thus far, with a total power of merely 245 kW.

How BS-HSR's electricity demand was covered by the railway PV system?

The PV system provided power to the railway system from 5 a.m. to 7 p.m. The railway PV systems were able to cover BS-HSR's electricity demand before 6 p.m. The local railway PV generation satisfied 93.4% of the electricity demand in Jiangsu without the assistance of energy storage devices.

Can railway PV supply power to the HSR?

The lowest daily PV generation is 1334 MWh, which still covers 60% of the electricity consumption. These results indicate the high potential of the railway PV system to supply power to the HSR and show that the railway system is not highly reliant on the storage system, which undoubtedly cuts the system costs.
