

# **120kW Photovoltaic Container for Data Centers**

## Overview

---

Can solar power power data centers & IT infrastructure?

Solar power has emerged as a game-changing solution for powering data centers and IT infrastructure. In recent years, the increasing concern for environmental sustainability and the rising energy demands of these facilities have propelled the adoption of solar power.

What is the PV power consumption of a data center?

During the period from 8:25 to 17:07, the PV power generation is higher than 17.5 MW. Therefore, during this time, the power consumption of the data center can be fully supplied by the PV system, and the excess PV power is used for the charging process of CAES system to compress the air and store the compressed energy.

How can data centers optimize solar power generation?

Monitoring and optimizing solar power generation through sophisticated analytics tools enable data centers to achieve maximum efficiency. Integration with energy management systems allows for seamless control and coordination of solar power alongside other energy sources.

How to develop a green data center driven by solar energy?

The system parameters are analyzed. In order to develop the green data center driven by solar energy, a solar photovoltaic (PV) system with the combination of compressed air energy storage (CAES) is proposed to provide electricity for the data center. During the day, the excess energy produced by PV is stored by CAES.
