

170w solar panel size

Overview

What is a 170 watt solar panel?

A 170W solar panel is a photovoltaic (PV) panel that converts sunlight into electrical energy, with a maximum power output of 170 watts. These panels are often used in residential, commercial, and portable solar energy systems. Their size and efficiency make them ideal for various applications, from rooftop installations to powering RVs and boats.

What are the dimensions of the 170W solar panel?

Our high-quality 170w fixed solar panels are only 17mm high, making them aerodynamic and lightweight. They are suitable for fitting on the roof of a 4wd, caravan, camper trailer or boat.

How many watts can a 170W solar panel produce?

A 170W solar panel can theoretically generate 850 watts with 5 hours of sun, but that is under the best scenario. In reality, solar panels produce less power, because their rated output is for the maximum. A 170W solar panel can give you a maximum of 170 watts, but under certain conditions the output will be less than that.

Is a 170W solar panel a good choice?

A 170W solar panel is a good choice for RV and off grid applications. Most of these panels have a 25 year warranty, testament to their quality. But the one question that often comes up is its amp output. This is something you need to consider especially if you are going to use it in an off grid setup.
