

20 cylindrical lithium iron phosphate batteries

Overview

What is a 12V Lithium iron phosphate battery?

A 12V lithium iron phosphate battery is a type of rechargeable battery that comes with a Battery Management System (BMS). The BMS in this battery protects against short circuits, overcharge, and deep discharge. It also balances cells to increase battery life, improve performance, and protect against mishandling.

What is a cylindrical lithium ion battery?

Cylindrical cells one of the most widely used lithium ion battery shapes due to ease to use and good mechanical stability. The tubular cylindrical shape can withstand high internal pressures without collapsing. Melasta produces multiple sizes and capacities according to the customer requirement.

How many cycles can a lithium phosphate LiFePO_4 battery run?

A Lithium Phosphate LiFePO_4 Battery charged at 1C can typically achieve around 2000 cycles. It offers notable safety features, such as resistance to puncture-induced explosions and a reduced risk of burning when overcharged. The lithium iron phosphate cathode material enables the seamless use of large-capacity lithium batteries in series.

Can lithium phosphate be used as a battery?

Miner's lamps, implantable medical devices (lithium iron phosphate is non-toxic, and only iron lithium can meet the requirements for lithium batteries), replacing lead acid, nickel hydrogen, nickel cadmium, lithium cobalt, and lithium manganese batteries in small electrical appliances.
