

20kw wind turbine grid-connected inverter

Overview

What is a small type wind grid tie power inverter?

The small type wind grid tie power inverter can obtain the wind energy from wind turbine, and can tie to the grid through its output cables with no extra equipment. The installation is very convenient and reliable. We call the system combining with small grid tie inverter and wind turbine as 'SGWT'.

What is an inverter in a wind turbine system?

In a wind turbine system, the inverter is a power electronic converter that converts DC power into AC power. It does this by turning on and off semiconductor power switching devices.

What is a wind turbine inverter kit?

Our wind turbine Inverter kits utilise the latest in 6 or 12 pulse AFE technology (25kW- 2MW) allowing for unity Power Factors to be maintained. Many wind turbines only generate at a fixed speed relative to the frequency of the grid either 50Hz or 60Hz. This limits the efficiency at lower wind speeds and may not be able to generate at all.

How to choose a wind turbine inverter?

If the wind turbine is DC output type, then you should choose WDL model inverters, and the input DC voltage range of the inverter should fit the DC output voltage of the wind turbine, the rated power of the inverter should also fit the max. power of the wind turbine, and the AC output of the inverter should fit the standard of AC utility grid.
