How much power does a 24V inverter consume?

A good sized 24V inverter could use about as much power just being on as your lights do. If the lights consume 45 watts and run for 12 hours a day, the total power usage would be $45 \text{ watts} \times 12 \text{ hours} = 540 \text{ watts}$. The battery power required for losses plus the load could double that. The lights themselves may be DC, using a small transformer (wall wart) to go from 120Vac to (likely) 12Vdc.

What is a pure sine wave inverter?

Rugged, heavy duty and industrial grade 3-phase pure sine wave DC/AC inverters, 24V, 48V, 125V or 250VDC inputs available. 208VAC or 380VAC or 415VAC output, 6000 watts. Pure sine wave output exactly duplicates mains power. Neutral point is grounded--Ultra quiet with no electrical interference.
