

25kW Mobile Energy Storage Container for Base Stations

Overview

What is a battery energy storage system?

Battery energy storage systems designed to support large-scale energy storage are used to help balance supply and demand on electrical grids. Customers rely on these systems to store excess energy produced during periods of low demand or when renewable energy sources, like solar and wind, are generating surplus power.

Are battery energy storage systems compatible with IEEE 1547?

Compatible with IEEE 1547, our solutions can be scaled to meet various applications including data centers, renewable energy (such as solar and wind), commercial buildings and industrial facilities. Battery energy storage systems designed to support large-scale energy storage are used to help balance supply and demand on electrical grids.

How many kV can a solar power system run?

Our solutions range from 6 kV to 35 kV with a maximum stand-alone capacity of 2 MW / 4 MWh. Compatible with IEEE 1547, our solutions can be scaled to meet various applications including data centers, renewable energy (such as solar and wind), commercial buildings and industrial facilities.
