Overview

What is a 5G Brain Center?

Often referred to as the brain center, this includes: Baseband Unit (BBU): Handles baseband signal processing. Remote Radio Unit (RRU): Converts signals to radio frequencies for transmission. Active Antenna Unit (AAU): Integrates RRU and antenna for 5G-era efficiency. 2. Power Supply System.

What is a base station power supply?

This acts as the “blood supply” of the base station, ensuring uninterrupted power. It includes: AC distribution box: Distributes mains power and offers surge protection. Switch-mode power supply: Converts and stabilizes power while managing DC output. Battery banks: Serve as backup power to keep systems running during outages. 3.

What is a base station connection diagram?

The connection diagram provides a clear overview of how the main base station equipment operates within the network. Surrounding this central "brain" are the “Four Guardians” that ensure seamless functionality: Power Supply: Provides a steady and uninterrupted energy source to keep the equipment operational.

What is a BBU in a base station?

The BBU is a key element of the base station's architecture. Unlike the large cabinet setups of the past, modern BBUs are compact and resemble distributed devices, similar in size to DVD players. Function: Processes baseband signals, which are low-frequency signals in their raw, unmodulated state.
