

# **6-series 12v solar container lithium battery pack saturation voltage**

## Overview

---

What is a 12V battery?

The term “12V” refers to the battery’s nominal voltage. Nominal voltage is the average voltage the battery operates at during everyday use. However, the battery’s actual voltage fluctuates depending on its charge (SOC) state. For example, a fully charged 12V lithium-ion battery will have a higher voltage than one partially charged or discharged.

What is a 12V lithium ion battery pack?

A 12V lithium ion battery pack is a battery pack made up of three or four lithium batteries connected in series and several lithium batteries connected in parallel. This configuration allows the capacity of a 12V lithium battery to be customized.

What is a 12V battery voltage chart?

A 12V battery voltage chart correlates a battery’s voltage level with its state of charge (SOC). It’s an essential tool for determining how much energy remains in your battery without relying on advanced monitoring systems. This chart becomes especially important when working with off-grid solar setups or RV applications.

Do 12V lithium-ion batteries have a voltage difference?

However, many users who rely on 12V lithium-ion batteries often notice discrepancies in voltage readings, especially when the battery doesn’t seem to reach a “full charge.” This can lead to confusion or concerns, mainly because the behavior of lithium-ion batteries differs from traditional battery types like lead-acid.
