

American solar glass greenhouse customization

Overview

What is a greenhouse?

A growing environment designed specifically for you. A greenhouse is an aluminum-framed structure, glazed with glass or polycarbonate, that is used to propagate and/or grow plants. Solar Innovations® designs and manufactures custom greenhouses to each customer's exacting specifications, no matter the size or purpose.

How do I choose the best glass for my greenhouse?

Regional Climate: The choice of glass type should be influenced by your local climate, balancing the need for insulation, light transmission, and energy efficiency. When selecting glass for your greenhouse, consider not only the immediate cost but also the long-term benefits and suitability for your specific climate and crop needs.

Why should you choose a glass greenhouse?

Although the initial cost of a glass greenhouse is higher, its long lifespan and reduced need for replacement or extensive maintenance make it a cost-effective choice in the long term. The superior light transmission reduces dependence on artificial lighting, further saving on operational costs.

Is a glass greenhouse a good investment?

A glass greenhouse is not only functional but also adds aesthetic value to a property. Its timeless appeal and durability can enhance the overall value of your home, farm, or property, making it an excellent investment. The main drawback is the vulnerability of glass to breakage due to extreme weather like hail.
