

Apia Uninterruptible Power Supply BESS

Overview

What is a battery energy storage system (BESS) & an uninterruptible power supply (UPS)?

Figure 1: A simplified project single line showing both a battery energy storage system (BESS) and an uninterruptible power supply (UPS). The UPS only feeds critical loads, never losing power.

What is uninterruptible power supply (UPS) system?

Uninterruptible power supply (UPS) system is an important application of ESS in a microgrid.

Does a Bess need a separate ups?

While the BESS can start up quickly, it is not instant and there will be a brief voltage supply disruption during startup. As a precaution, the system will require a separate UPS to power sensitive or critical components, potentially including the controller for the BESS.

Should you buy a ups or a Bess system?

UPS systems are cheaper upfront. But their batteries wear out faster and aren't designed for daily use. BESS systems are more expensive initially, but they offer long-term savings through energy arbitrage, grid incentives, and durability (especially with lithium iron phosphate batteries). Which One Should You Choose?
