

# Are Praia s monocrystalline solar panels reliable

## Overview

---

Are polycrystalline solar panels a good choice?

Their expected functional life is also typically within that range, making them a very dependable choice for long-term energy generation. Polycrystalline panels generally have a slightly higher degradation rate than monocrystalline panels, usually around 0.5% to 0.8% per year.

Are monocrystalline solar panels a good choice?

Monocrystalline solar panels perform strongly on all key fronts, which is why they're currently the most popular type of panel. If you go for monocrystalline panels, you'll be choosing from a collection of the most efficient, powerful, and long-lasting modules on the domestic market.

How long do polycrystalline solar panels last?

Like their monocrystalline counterparts, polycrystalline panels also come with impressive 20 to 35-year performance warranties. Their expected functional life is also typically within that range, making them a very dependable choice for long-term energy generation.

Are polycrystalline panels better than monocrystalline panels?

Polycrystalline panels generally have a slightly higher degradation rate than monocrystalline panels, usually around 0.5% to 0.8% per year. While their efficiency is a bit lower due to the less uniform crystal structure, they are still very durable.
