

# Are solar panel cells fragile

## Overview

---

How fragile are solar cells?

The solar cells themselves are fragile, but they are covered by thin sheets of plastic for impact resistance. They are tested to withstand hail storms, etc. Well that makes sense, thanks for getting back to me! known as Photovoltaic Sheets.

Why are solar panels so bad?

Unfortunately, as with many industries that began with a big boom, many different and inexperienced companies tried to install solar panels. This led to a lot of bad experiences, and poor installations. During solar energy's early days in 2010, there were a lot of restrictions that surrounded the industry.

Are solar panels durable?

In most cases, yes. Solar panel durability is tested to withstand extreme conditions, but factors like dirt buildup, heavy rain, snow, and strong winds can impact performance. Proper installation and maintenance help ensure your system lasts for decades.

Do solar panels need a surge protector?

Using a surge protector and ensuring proper shelter for your inverter can help maintain solar system durability in storm-prone areas. Snow buildup on solar panels can reduce efficiency by blocking sunlight from reaching the photovoltaic cells.
