Can solar-powered smart clothing be self-sustaining?

In a paper titled 'Self-sustaining personal all-day thermoregulatory clothing using only sunlight' published in the journal *Science*, researchers describe how they created solar-powered smart clothing using flexible solar cells and an electronic device.

Can solar panels be used in clothing?

Critics argue that the integration of solar panels into clothing may compromise the overall design and comfort. Additionally, debates exist regarding the efficiency of solar textiles and the need for further advancements to match the performance of traditional solar panels. The future of solar textiles holds immense potential.

Can solar textiles be used in clothing?

Continuous advancements in material and design development have addressed challenges such as flexibility, washability, and integration into different types of clothing. Solar textiles have vast potential applications in clothing, accessories, and other wearable items.

Can a thermoregulatory clothing system cool polar regions?

But this can be difficult as the world's temperatures continue rising and in "harsh scenarios," such as frigid polar regions and even space travel. The team developed a thermoregulatory clothing system that combines an organic photovoltaic module with bidirectional electrocaloric devices that are capable of heating or cooling.
