

# **Australia Sydney solar container battery Standard**

## Overview

---

AS/NZS 5139:2019 was published on the 11 October 2019 and sets out general installation and safety requirements for battery energy storage systems. Are solar batteries safe in Australia?

In Australia, all solar battery installations must meet the requirements of AS/NZS 5139:2019, the national standard that outlines safety and regulatory guidelines for battery energy storage systems. If you're planning to install a solar battery at your home, here are the key things you need to consider:

What are Australia's New energy storage standards?

The updated standards apply primarily to lithium-based home energy storage systems, which dominate the Australian market due to their efficiency and compact size. Whether you're installing a stand-alone battery or integrating it into a complete solar solution, the compliance rules are the same.

Can solar batteries be installed in Sydney?

NSW adheres to the updated AS/NZS 5139:2019 standard, which also integrates with local building and fire codes. This means if you're installing solar batteries in Sydney, your system must be designed with location-specific factors like bushfire zones and building materials in mind. One of the most noticeable impacts is on retrofits.

Why do Australians need a solar and battery system?

As Australia moves towards a cleaner, more sustainable energy future, the demand for solar and battery systems has surged across homes, businesses and remote sites. But with rapid growth comes the critical need for safe, compliant and well-designed installations.
