

Automatically cut off power when outdoor power is in use

Overview

What happens when a power strip is turned off?

When the device in the master outlet is turned off, the other outlets cut their power to reduce standby power. Masterless: These power strips use a similar but inverse concept: when no devices plugged into the power strip are drawing power, the whole power strip cuts off all outlets.

How does a power strip work?

You'll choose one primary device (for example, a computer). When that device is switched off, the power strip will automatically cut electricity to other connected devices (like a printer, phone charger, or paper shredder). Masterless Power Strip And finally, there's the masterless power strip, sometimes known as a current-sensing power strip.

What is a smart power strip?

The primary function of a smart power strip is to intelligently control the amount of energy your devices and appliances use. This can be done in several ways. Timer: These power strips offer a simple manual option. Just program the times you want the power strip (or specific outlets) to turn on and off.

How do I choose a smart power strip?

Smart power strips vary in how they monitor and manage energy usage, and just as with a standard power strip, the number and configuration of outlets can vary. Choosing the right smart power strip for your needs means considering the appliances you intend to use it for and how often you use those appliances.
