## Overview

---

What is a UPS system?

An Uninterruptible Power Supply (UPS) is a power protection device equipped with an energy storage unit, primarily utilizing an inverter to ensure regulated and uninterrupted power output.

What is an uninterruptible power supply (UPS)?

Uninterruptible Power Supply (UPS) | Schneider Electric Hong Kong, China. An Uninterruptible Power Supply system provides emergency power when the main source fails, using batteries to ensure a continuous supply. It conditions incoming power, protecting equipment from fluctuations. We offer various UPS power supply types for different needs.

What does a ups do if a power supply fails?

The system remains in standby mode, monitoring the main power supply. When it detects a power failure, the UPS switches to backup power from the battery within milliseconds. Best For: Low-power applications, such as home computers, gaming systems, small office equipment, and personal devices.

What is a mechanical non-battery UPS?

UPSs are connected directly to a company's main power supply. Mechanical non-battery UPS systems are voltage frequency independent (VFI) devices that are referred to as mechanical uninterruptible power systems. They are double conversion units where power conversion is mechanical with motors that act like rectifiers.
