

BESS price of energy storage power station in Poland

Overview

Is Poland moving towards battery energy storage systems (Bess)?

As expected, Poland's latest capacity market auctions have highlighted a significant shift towards the battery energy storage systems (BESS) beside the fact that the de-rating factor has been significantly decreased.

How many MW rated energy storage systems are there in Poland?

The capacity obligations for these projects ranged from 1.2 MW to 153 MW rated power, with an average capacity of around 30 MW. The decision to reduce the de-rating factor for energy storage systems in the last capacity market auction in Poland from 95 percent to 61 percent did not prove detrimental to the market.

Where are Bess projects located in Poland?

The geographical distribution of BESS projects in Poland is concentrated in regions with high renewable energy potential, such as Lower Silesian, Masovian, and Pomeranian. These areas are pivotal for Poland's energy transition, offering the infrastructure necessary for significant BESS installations.

What role does Bess play in Poland's energy transformation?

This transition requires effective storage solutions to manage the intermittency of renewable sources like wind and solar. The state's investment of approximately \$4.7 billion in battery storage projects underscores the critical role of BESS in Poland's energy transformation. Geographical Distribution and Strategic Focus Areas
