

Battery cabinet charging and discharging 2 2KWH site

Overview

What is a lithium-ion battery charging cabinet?

The lithium-ion battery charging cabinet is built using all-welded, 18-gauge (1mm) steel and includes a double wall with 1.5" (38mm) of insulating air space to absorb the energy of high temperature battery failures for improved fire safety.

How much weight can a Li-ion charging cabinet hold?

The safety charging cabinet also comes with one adjustable shelf with a weight capacity of 65 lbs and is approximately 2" thick. An 8-receptacle surge protected power strip is located inside the li-ioncabinet to plug in your charging devices.

How many batteries can be stored in a GFCI cabinet?

A dedicated 10VAC/60Hz GFCI supply using a minimum 14 gauge cord is required (not included). The total number of batteries that can be safely stored and charged in the cabinet will vary based on the amount of energy in each battery. The cabinet's Total Energy Containment Rating (TECR) is 2kWh. $2,000 / (V \times Ah) = \text{number of batteries}$.

What happens if a battery is charging inside a safe?

You're at work, your batteries are charging inside the safe - and suddenly an alarm sounds. A clear signal that something is wrong. A battery is overheating, or perhaps already on fire. Because the safe remains closed, the fire is safely contained and cannot spread. This gives you enough time to warn staff and emergency services.
