## Overview

---

What are monocrystalline solar panels?

Monocrystalline solar panels are made with wafers cut from a single silicon crystal ingot, which allows the electric current to flow more smoothly, with less resistance. This ultimately means they have the highest efficiency ratings, longest lifespans, and best power ratings on the market, ahead of all other types of solar panels.

How much does a monocrystalline solar & battery system cost?

A 4.5kWp monocrystalline solar & battery system usually costs around £11,307, including the price of installation. This should get you 10 solar panels, each with a 450-watt peak power rating, as well as a 5kWh battery.

How much power does a monocrystalline solar panel have?

The best monocrystalline solar panels have power ratings upwards of 500W, with some exceeding 600W and even 700W. In contrast, you'll struggle to find a polycrystalline panel with a power rating above 400W, and they've long fallen around 20% below monocrystalline models, according to data analysts Wood Mackenzie.

What are the different types of monocrystalline panels?

Amidst this stunning display of monocrystalline dominance, manufacturers paired these panels with five different technologies: TOPCon, PERC p-type and n-type, HJT, and back contact (more detail on these in the next section).
