

Berlin Energy Storage Lead Acid Battery

Overview

Are lead-acid batteries a good choice for energy storage?

Lead-acid batteries have been used for energy storage in utility applications for many years but it has only been in recent years that the demand for battery energy storage has increased.

Does stationary energy storage make a difference in lead-acid batteries?

Currently, stationary energy-storage only accounts for a tiny fraction of the total sales of lead-acid batteries. Indeed the total installed capacity for stationary applications of lead-acid in 2010 (35 MW) was dwarfed by the installed capacity of sodium-sulfur batteries (315 MW), see Figure 13.13.

Are lead batteries sustainable?

Improvements to lead battery technology have increased cycle life both in deep and shallow cycle applications. Li-ion and other battery types used for energy storage will be discussed to show that lead batteries are technically and economically effective. The sustainability of lead batteries is superior to other battery types.

Can lead batteries be recycled?

A selection of larger lead battery energy storage installations are analysed and lessons learned identified. Lead is the most efficiently recycled commodity metal and lead batteries are the only battery energy storage system that is almost completely recycled, with over 99% of lead batteries being collected and recycled in Europe and USA.
