What is MPPT solar inverter?

Nowadays, almost all solar inverters are embedded with MPPT technology. An MPPT solar inverter performs two roles: The maximum power point tracker in the inverter converts high DC power into low DC power. The low DC power is converted into AC power that's used to run your household appliances.

Do string inverters need MPPT technology?

MPPT technology is a necessity for all on-grid string inverters these days. Without one, a string inverter will not be able to perform well. Although MPPT has drawbacks, they're also the most economical option. Only MPPT in string inverters can ensure that a solar array is generating maximum power.

What are the different types of MPPT inverters?

The text mentions several types of MPPT inverters: SmartSolar MPPT Inverters, Chilicon Microinverters, Cotek CX Series, SC Series, SD Series (with power ratings of 1500W, 2500W, 3500W), SE Series (with power ratings of 200W, 350W, 400W), and SL Series, as well as SP Series.

What types of inverters are available?

We provide single and three-phase high-efficiency PV string inverters for a capacity of 1kW to 110kW, storage inverters (single phase 1-12kW, three phase 3-60kW, split phase 3-9.6kW, AC coupled), energy storage battery series (low voltage wall mounted series, high voltage stackable series) and all-in-one storage products.
