

Black Mountain AC Inverter

Overview

Does the brand of an Inverter air conditioner matter?

Of course, the brand does matter. Low-quality inverter air conditioners are more likely to give off in a few years or sometimes, in a few months. That's why things like inverter air conditioners that involve some electronics and technologies are better to go for a more reputable brand.

What are the different types of Inverter air conditioners?

The most common type of inverter air conditioner is the split unit or sometimes known as the mini split. Apart from that, western countries have inverter window air conditioners. Furthermore, they also have inverter centralized split air conditioners or better known as variable-speed air conditioners.

Is an air conditioner an inverter?

The word “inverter” refers to the compressor of the air conditioner. As long as the compressor of the air conditioner can regulate its speed and hence, its capacity, the air conditioner is considered as an inverter air conditioner. However, some air conditioners are “partially inverter”.

What is the difference between inverter and non-inverter AC?

Check out my ultimate comparison between inverter and non-inverter ACs. The most obvious difference between an inverter and a non-inverter air conditioner is that an inverter air conditioner is more expensive. In Malaysia, an inverter air conditioner is about 30% more expensive than a non-inverter air conditioner with similar specifications.
