

Botswana Cadmium Telluride solar Glass

Overview

What is cadmium telluride (CdTe) photovoltaic glass?

Cadmium Telluride (CdTe) photovoltaic glass is a type of solar photovoltaic glass that incorporates thin-film photovoltaic technology based on the semiconductor compound cadmium telluride.

Which glass substrate is used in the production of CdTe solar cells?

Rigid glass substrates, such as soda-lime glass (SLG) [1, 2] or borosilicate glass [3], have been traditionally applied in the production process of CdTe solar cells and are widely used among researchers.

Are polyimide solar cells better than glass?

The solar cells achieved an efficiency of 11 %. However, polyimide (PI) is less thermally stable compared to glass and may exhibit thermal expansion, which can cause delamination and degradation of the device. PI is also more susceptible to moisture and oxygen, which can degrade the effectiveness of the flexible CdTe solar cells [4]. Fig. 4.

What is CdTe solar glass?

Widespread use of CdTe solar glass in buildings not only meets the electricity demands of the structure but can also feed surplus energy back into the grid, ensuring optimized energy usage. This high-efficiency energy solution helps reduce energy consumption and carbon emissions, contributing to the advancement of green buildings [5].
