

# Can 150W and 100W solar panels be connected in series

## Overview

---

How much power does a solar panel have?

For Solar Panels connected in parallel total power is calculated as follows:

Total connected power =  $140W + 150W + 150W + 150W = 590W$  Unlike Solar Panels connected in series, the different Wattage parameters do not effect the overall outcome of the array.

How much power does a 4 x 150W solar panel produce?

If we connect 4 x 150w Solar Panels in series the total power is calculated as follows: Total power =  $150W + 150W + 150W + 150W = 600W$  However if we were trying to create 620watts of power using different wattage solar panels we would have a different outcome. Total Connected Power =  $140W + 160w + 160w + 160W = 560W$ .

How many watts are connected to a solar panel?

Total connected power =  $140W + 150W + 150W + 150W = 590W$  Unlike Solar Panels connected in series, the different Wattage parameters do not effect the overall outcome of the array. However if the voltages of the Solar Panels are drastically different then this can cause some discrepancies.

Should you connect solar panels in series or in parallel?

There are two main types of connecting solar panels – in series or in parallel. You connect solar panels in series when you want to get a higher voltage. If you, however, need to get higher current, you should connect your panels in parallel.
