

# **Can lead-acid batteries be shipped in containers**

## Overview

---

How are lead acid batteries transported?

The transportation of lead acid batteries by road, sea and air is heavily regulated in most countries. Lead acid is defined by United Nations numbers as either: The definition of 'non-spillable' is important. A battery that is sealed is not necessarily non-spillable.

Can a lead-acid battery be shipped as a general cargo?

If the battery meets the requirements of IMDG Code Special Provision SP238, it can be treated as general cargo. This special clause acts like a “green light” for shipping lead-acid batteries — but only if all detailed conditions, such as packaging and battery state, are strictly followed. 3. Nickel-Metal Hydride (NiMH) Batteries.

What are the requirements for shipping a battery?

Pallets and boxes must be designed specifically for batteries. Corrosive hazards - Lead-acid batteries contain sulfuric acid electrolytes which can leak and damage other cargo. Acid-resistant pallet and container materials must be used. Orientation - Batteries must be shipped upright to avoid electrolyte spilling.

What are the logistical considerations for shipping lead-acid batteries?

The top logistical considerations for shipping these types include: Weight - Lead-acid batteries are very heavy, requiring structural reinforcement of pallets and handling equipment that can support weight. Short circuit prevention - Proper insulation and separation between battery terminals are crucial to prevent short circuits during transport.
