## Overview

---

Can you even use solar panels on your home without battery storage?

The short answer is, yes you can. Can you use solar panels without battery storage?

If battery storage isn't in the cards for now, don't worry! You can still use your solar panels to power your home without battery storage. In fact, a majority of home solar systems aren't connected to battery storage. Here's how it works: Early morning and evening are times with lower solar production, but higher energy needs.

How does a solar system work without battery storage?

Without battery storage, solar systems typically use the utility grid as a battery. Solar energy is first used to directly power your home, and the excess energy is pushed onto the local grid to power neighboring systems. When the solar system is underproducing, the home draws electricity from the local grid.

Can solar energy be used for energy storage?

Solar power can be used to create new fuels that can be stored and later used to provide energy. Existing compressed air energy storage systems often use the released air as part of a natural gas power cycle to produce electricity.

What is energy storage?

Energy storage is a system that can help more effectively integrate solar into the energy landscape. Sometimes it is co-located with, or placed next to, a solar energy system, and sometimes the storage system stands alone.
