

# **Canada Toronto Energy Storage solar Project**

## Overview

---

Toronto, Ontario – May 7, 2025 – The Oneida Energy Storage Project has officially commenced commercial operations, becoming the largest grid-scale battery energy storage facility in operation in Canada and one of the largest globally. What is the fastest growing energy storage technology in Canada?

BESS is the fastest growing energy storage technology in Canada and is also the dominant storage technology in terms of capacity and number of sites. All but four projects proposed to be commissioned by 2030 are battery storage, with two CAES and two PHS projects also proposed.

What is the largest solar project in Western Canada?

Two projects have jumped to the next step and are described in applications for construction approval by the Alberta Utilities Commission. The larger of the two, the proposed 77.5-MW Vulcan Solar Project in southern Alberta, would be the largest solar power project in Western Canada.

When did energy storage start in Canada?

The first energy storage project in Canada, the Sir Adam Beck Pump Generating Station, came online in 1957. However, the next project did not come online until 2013. There are three main types of energy storage currently commercially available in Canada:

What types of energy storage are available in Canada?

There are three main types of energy storage currently commercially available in Canada: Storage is playing an increasingly important role in the electricity system by improving grid reliability and power quality, and by complementing variable renewable energy sources (VRES) like wind and solar.

## Canada Toronto Energy Storage solar Project
