

# **Circuit breaker in substation in Calcutta**

## Overview

---

What is a circuit breaker in a substation?

A circuit breaker in substation is a key component in electrical power systems, designed to interrupt the flow of electricity when a fault occurs, such as a short circuit or overload. Depending on system design, these devices can operate manually or automatically and come in various types, including air, vacuum, oil, and SF<sub>6</sub> gas.

What is a circuit breaker?

A circuit breaker is a device that is used to protect an electrical circuit from damage caused by overload or short-circuit. Circuit breakers are designed to interrupt the flow of current in an electrical circuit in the event of an overload or short-circuit.

What are the different types of circuit breaker?

The most common type is the air blast circuit breaker. These breakers use compressed air to extinguish an arc that has been created when the breaker is opened. Other types of circuit breakers include oil, vacuum, and solid state. There are different types of circuit breakers in substations.

What is an example of a hybrid circuit breaker?

Example: In a modern urban substation where space is limited, a hybrid circuit breaker might be used to protect the main incoming feeder. The hybrid design allows for compact installation while providing reliable fault protection and efficient arc quenching.
