Overview

How to solve the 5 G base station optimization location?

To solve the 5 G base station optimization location considering timely reliability, we propose a novel NDPR model considering the signal strength deterioration and the actual data transmission process in wireless sensor networks, which can provide better service qualities for the users.

Can NDPR optimize the 5 G base station location?

Secondly, considering the signal strength deterioration and the actual data transmission process, we propose a novel NDPR model to optimize the 5 G base station location considering timely reliability, which can provide better service qualities for the users.

What is the optimal 5 G base station location model?

Mathematical model The proposed optimal 5 G base station location model considering timely reliability is as follows. The objective function of the model is that the total building cost of the base station is the lowest while meeting the demand for timely data transmission, (23) Minimize Total building cost (T B C) = $\sum_{r \in R} x_r C_b r$.

What happens after a signal enhancement is completed in a base station?

After the signal enhancement is completed in the base station, the data packet continues to be transmitted to the processing center. Finally, the data processing center provides better services for users by analyzing these data packets. Fig 1. The framework of the Intelligent Internet of Things.
