

Construction of new energy power generation base stations

Overview

The reporter learned that the planning and construction of many new energy bases, including large-scale wind power and photovoltaic bases, are being accelerated, and investment in UHV, pumped storage and other fields has increased, and a number of major projects are planned to start in the second half of the year. How will China's new power base work?

All projects at the base are scheduled to be put into operation within China's 14th Five-Year Plan (2021-25) period. Once operational, the base is expected to export 24 billion kWh of power annually to East China's Shandong Province through the ultra-high-voltage power transmission line.

Where is the second phase of China's nuclear power plant being built?

The second phase kicked off construction on Tuesday in Northwest China's Ningxia Hui autonomous region, said its operator China Energy Investment Corp, or China Energy.

What is the largest grid-forming energy storage station in China?

This marks the completion and operation of the largest grid-forming energy storage station in China. The photo shows the energy storage station supporting the Ningdong Composite Photovoltaic Base Project. This energy storage station is one of the first batch of projects supporting the 100 GW large-scale wind and photovoltaic bases nationwide.

How complex is the construction of the National Power System (NPS)?

The construction of the NPS is a highly complex project that requires breaking through the technical bottlenecks in various aspects of power generation, transmission, storage, distribution, and consumption. This study analyzes the development direction, technical issues, and key construction tasks of the NPS.
