

# Croatia energy storage exports

## Overview

---

Does Croatia need to import energy?

In reality, Croatia does not need to import energy as it has many natural sources that could be used instead, such as solar, wind, water, gas, and others. For this reason, Croatia should, in fact, export energy and not depend on other countries. Croatia depends on the import of gas, oil, and coal because its existing sources have been depleted.

Is Croatia energy-independent?

Croatia also co-owns the Krško nuclear reactor in Slovenia, which is included in its energy mix as imported electricity. To become energy-independent and sustainable, Croatia counts on its abundant renewable energy resources. In March 2025, the Croatian government updated its Energy Strategy for the period until 2030, with an outlook through 2050.

How is energy used in Croatia?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

What was the energy consumption in Croatia in 2018?

Get a set of graphs commented by energy efficiency specialists. In 2018, final energy consumption in Croatia amounted around 6.8 Mtoe, 12.2% above its 2000 level. Residential sector was the largest consuming sector in 2018; consumption in this sector remained stable in the period from 2000 to 2018.
