

Current source grid-connected inverter

Overview

What is a grid-connected current-source inverter?

The grid-connected current-source inverters (CSIs) act as an interface between renewable energy and the power grid, which has a greater impact on the energy conversion system.

What is the control design of a grid connected inverter?

The control design of this type of inverter may be challenging as several algorithms are required to run the inverter. This reference design uses the C2000 microcontroller (MCU) family of devices to implement control of a grid connected inverter with output current control.

Is a switching-cell inverter suitable for grid-connected photovoltaic systems?

This paper presents a high-reliability current source inverter with a switching-cell structure for grid-connected photovoltaic systems. When compared to the conventional current source inverter, the proposed converter has no open-circuit issue, which can minimize the overlap time interval.

What does a current source inverter do?

The current source inverter is responsible for converting the DC current from the PV panels into a controlled AC current. The control unit regulates the switching of the power semiconductors in the inverter to achieve the desired AC voltage and frequency.
