

Do solar panels have a shelf life

Overview

There is technically no expiration date on solar panels. However, over time, they naturally tend to become less efficient at producing energy. How do you prolong the lifespan of a solar panel?

There are a number of ways to prolong solar panel lifespan such as regular maintenance, cleaning and repair, all of which increase their functional lifespan. The lifecycle of a solar panel naturally includes the steady loss of efficiency over several years of use.

Are solar panels still useful after their lifespan?

No, solar panels are still useful after their lifespan. Solar panels still produce power, but at a slower rate, even though their energy efficiency gradually decreases. Older solar panels are donated to organizations with limited access to electricity or used for less essential purposes to extend their useful lives.

How long do solar panels last?

That means after 25 to 30 years, most high-quality panels will still generate around 85–90% of their original output. If your panels' output drops below the level promised in the warranty (for example, below 80% after 25 years), you may be entitled to a repair, replacement, or compensation.

Do different types of solar panels have varying lifespans?

Yes, different types of solar panels have varying lifespans. A solar panel's longevity is affected by several variables, such as the type of solar cells that are utilized and the caliber of the materials and production techniques. For instance, monocrystalline solar panels are renowned for their durability and longevity.
