

# Do we need lithium batteries for energy storage

## Overview

---

Are lithium-ion batteries a viable energy storage technology?

Lithium-ion batteries have become the dominant energy storage technology due to their high energy density, long cycle life, and suitability for a wide range of applications. However, several key challenges need to be addressed to further improve their performance, safety, and cost-effectiveness.

How much lithium-ion battery storage does the world need?

Meng projects that a future version of the world that relies on clean energy will require between 200 TWh and 300 TWh of lithium-ion battery storage. That is an intimidating figure, she acknowledged, given that so far, the world's battery industry has achieved only 1 TWh annual production of lithium-ion battery capacity.

Why are lithium-ion batteries important?

Lithium-ion batteries have emerged as a key player in enhancing grid reliability, optimizing energy distribution, and supporting the transition to a more sustainable and resilient energy infrastructure .

What is the future of lithium-ion battery storage?

Key Point No. 4: Recycling batteries and mining for their raw materials present interrelated challenges — and opportunities. Meng projects that a future version of the world that relies on clean energy will require between 200 TWh and 300 TWh of lithium-ion battery storage.
