When does an earth leakage breaker trip?

An earth leakage breaker trips as soon as it detects a current flowing to ground. This happens, for example, when you grab a live wire and the current flows through you to the ground you are standing on, or if there is a fault in the system causing current to leak to ground.

Why is an earth leakage breaker necessary?

An earth leakage breaker is necessary to provide a key safety mechanism that reduces the harmful effects of most faults caused by the live wire touching something it shouldn't. This is achieved by connecting the earth wire to both the physical ground and the neutral point at the source of power.
