

Emergency Rescue Solar-Powered Container Hybrid

Overview

What is a solar-powered emergency shelter?

The prototype is the first solar-powered, reusable, versatile, safe, affordable, and energy-efficient emergency shelter integrating passive design, energy storage, and combined DC/AC power system.

Can solar power improve energy resilience in emergency buildings?

In recent years, more work has been done that utilises solar power in achieving energy resilience in emergency buildings. Liu Chang combined solar cells with the envelope structure, while Kalpana et al. designed and utilised solar power generation systems to build small shelters with a resilient energy supply.

How can solar power be used in disaster-affected communities?

Liu Chang combined solar cells with the envelope structure, while Kalpana et al. designed and utilised solar power generation systems to build small shelters with a resilient energy supply. Disaster-affected communities often live in temporary and/or transitional shelters with suboptimal living environments after displacement.

How can emergency shelters improve sustainability and energy resilience?

Integrate an approach to implement sustainability and energy resilience in the design of emergency shelters, with a view to alignment with QSAND and the SDGs. Contextualize the application of global approaches, ensuring early and strong engagement with local communities and stakeholders, and aligning this with local regulations.
