

Energy storage lithium batteries are in sufficient supply

Overview

Why do we need more lithium ion batteries?

An increased supply of lithium will be needed to meet future expected demand growth for lithium-ion batteries for transportation and energy storage.

Are lithium-ion batteries good for the environment?

Lithium-ion batteries (LIBs) are central to the clean energy transition, yet their environmental impact is often overlooked. Global LIB demand is projected to reach 6,530 gigawatt-hours by 2050, thirty times the 2020 level, driven by the demand for renewable energy and electric transportation.

What are lithium-ion batteries used for?

As a forefront energy storage technology, lithium-ion batteries (LIBs) have garnered immense attention across diverse applications, including electric vehicles, consumer electronics, and medical devices, owing to their exceptional energy density, minimal self-discharge rate, high open circuit voltage, and extended lifespan.

Can domestic lithium supply satisfy Future EV batteries' lithium demand?

The growth of domestic lithium production in China, Europe, and the USA underscores the importance of determining to what extent domestic supply can satisfy future EV batteries' lithium demand and whether imports will be necessary. Given that lithium is also used in other sectors such as glassmaking, an analysis of how lithium is used is warranted.
