## Overview

---

Is grid-connected solar power generation possible in Ethiopia?

Through study explored the potential of grid-connected solar PV power generation in Ethiopia. The study found that the average value of PV power plant capacity factor of the different locations considered is 19.8%, and the mean value for the electricity exported to the grid is 8674 MWh/year.

Can off-grid PV systems be used for pastoral electrification?

This paper presented the feasibility study of off-grid PV systems for pastoral electrification and discussed the national energy strategic plan and policy. The findings show that the three selected woredas, such as Moyale, Yabelo, and Dire, have high potential solar sources to generate electricity.

Is an off-grid solar PV system feasible?

The design, simulation, and feasibility study of an off-grid solar PV system are investigated. The inverter, battery size, number of batteries, and solar array's capacity are determined by optimization using HOMER software. The three locations, Moyale, Yabelo, and Dire, have significant solar resource potential.

How does the Ethiopian Electric Utility (EEU) manage mini-grid sites?

Through government initiatives, the Ethiopian Electric Utility (EEU) selects mini-grid sites and places bids for private companies to contest. This bid can be an "MST" (minimum subsidy tender), through which the company is responsible for handling the whole process under government supervision.
