

Fixed energy storage emergency power supply for computer room

Overview

How a power supply system can help a data center?

Individual power supply solution for the data center: Depending on the dimensions and requirements, we plan and install the equipment for your emergency power generator for the server room. The type of control and definition of communication between the UPS system and the genset are particularly important for efficient server room operation.

What do you do with uninterruptible power supplies?

We design, build and test battery installations for uninterruptible power supplies and provide a maintenance, replacement and recycling. A range of emergency backup power solutions for server rooms and datacentres from Server Room Environments including UPS batteries, standby power generators and energy storage systems.

What power supplies does server room environments provide?

In addition to the latest energy saving uninterruptible power supplies, Server Room Environments also supplies replacement UPS batteries, standby power generators and energy storage systems using the latest lithium-ion battery technologies.

What is a local energy storage system?

Local Energy storage systems can also help a server room or datacentre operator to store energy generated from nearby renewable power sources including solar PV and wind farms. The energy can be used to off-set electricity usage from the grid and also allow the facility to support grid and frequency balancing initiatives.
