

# Flat glass solar modules

## Overview

---

What is the difference between glass and plastic solar modules?

Glass/Glass modules withstand air and moisture and offer best cell protection, while plastic backsheets of glass/foil modules become porous. The Glass/Glass composite protects solar cells against micro cracks and thus ensures long-term operating life of 40 years and more.

Which float glass is best for solar applications?

Arsenic- and antimony-free extra clear float glass for solar applications. SunMax Premium is exclusively produced in a float glass process. The industrial float glass process adheres to very strict production tolerances and guarantees the lowest possible defect density. Read more about some of our recent selected finished success stories.

What is Solar Photovoltaic Glass?

Solar photovoltaic (PV) glass is a specialized type of glass that integrates solar cells, which generate electricity from the sun's rays. In order for the glass to turn sunshine into energy, a layer of translucent solar cells is coated onto the surface of the glass.

Who makes solar float glass?

Based in Tokyo, Japan, AGC Solar was established in 1907. They are one of the best solar photovoltaic glass manufacturers in the world. The primary objective of AGC is the industrial manufacturing and sale of ultra-low-iron solar float glass with a solid and long-lasting anti-reflective covering.
