

Funafoti high power UPS uninterruptible power supply

Overview

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is a device designed to provide backup power when the primary power source fails or when voltage levels drop below acceptable limits. UPS systems are commonly used in computers, server farms, and data centers to ensure uninterrupted operation and protect digital data from power-related disruptions.

Why should you buy a Fuji Electric UPS system?

Fuji Electric's high-efficiency UPS systems help to protect critical customer systems and data from power troubles while at the same time helping to improve the global environment by reducing CO2 emissions. How does a standby Ferro ups work?

The Standby-Ferro UPS (also known as standby ferro-resonant UPS) uses a three-winding transformer to couple the load to the power source. As shown in Figure 3, primary power flows through a normally closed transfer switch to the transformer coils, where it is coupled to the secondary coil and supplies power to the output load.

What is the primary power path in a standby UPS?

The primary power path in a standby UPS often includes LC filters to reduce electrical noise and surge protection circuitry for shielding against voltage spikes. An illustration of a standby UPS system.
