

# German energy storage cabinet battery

## Overview

---

How many battery storage systems are there in Germany?

According to preliminary numbers from the German Solar Industry Association (BSW Solar), there were 1.8 billion installed battery storage systems in Germany at the end of last year. They had a capacity 19 gigawatt hours (GWh), enough to cover the daily electricity consumption of two million two-person households.

How much power can a battery storage system provide?

Credit: RWE. German energy group RWE has commissioned two battery energy storage systems (BESS) with a combined capacity of 220MW at its Hamm and Neurath sites. The company claims the facilities can reach their nominal capacity within seconds and are designed to provide power for approximately one hour, or 235 megawatt-hours (MWh).

What is a battery energy storage system?

Currently, most large battery systems (Battery Energy Storage Systems, or BESS) are powered by lithium-ion batteries. Such batteries are favoured especially due to their long life cycle and simple operation. Furthermore, alternative battery technologies are still in development and therefore not yet ready for market launch.

Does RWE have a battery storage system?

RWE has made the electricity from these systems available on various energy markets. Lord Mayor of Hamm Marc Herter said: "The commissioning of the large battery storage system at the Westfalen power plant site shows that Hamm continues to be a key energy location in the region."
