

Glass solar awning

Overview

What is a solar awning?

Maximize your space with Lumos Solar Awnings. Solar awnings offer a combination of practical use and green energy, transforming buildings into power-generating hubs while enhancing architectural appeal. Lumos specializes in designing solar awnings that fit into structures, providing energy efficiency, shade, and style all in one package.

How are solar canopies & awnings changing how we use solar energy?

Solar canopies, awnings, and walkways are changing how we use solar energy. If you want a simple setup or a custom design, Lumos offers smart, flexible, and efficient solutions. Lumos solar canopies, awnings, and walkways use bifacial panels that collect sunlight from both the front and back.

What is the difference between Lumos solar awnings & canopies?

In considering your solar panel shade structure designs, please note: Lumos canopies are separate structures, while our awnings are attached to buildings by support posts. Our walkways can either be independent or attached depending on your unique needs. Lumos Solar Canopies are all about enhancing spaces with sustainable design.

What accessories do I need for my awning?

There are a range of accessories to suit your requirements: Solar protection: High-quality awnings offer perfect sun protection: installed on top, vertical or as an under glass awning. Lighting: Make the most of the evening – built-in LED spotlights provide atmosphere and ambience.
