

Guatemala Ambient Solar Air Conditioning

Overview

Does solar adsorption cooling work in tropical climate conditions?

In order to explore the potential of the SADCS in tropical climate conditions, the dynamic behaviour of an adsorption cooling system that is solar-driven using the conventional silica gel -water sorbent adsorbent pairs for a typical day of hot climate condition in Malaysia, Singapore and Thailand was studied.

Are solar panels suitable for air-conditioning systems?

There are two different types of processes namely electric process and thermal process . The electric process will power the vapour compression cycle air-conditioning system. However, due to the large area required for the solar panel to generate electricity, it is not suitable for air-conditioning systems.

Can solar energy be used in air conditioning?

One of the most attractive alternative solutions is the incorporation of solar energy into air conditioning and refrigeration unit, which is known as a 'solar-driven air conditioning' system, such system can promote green cooling technologies and many researchers have worked on in recent years .

Can solar-driven air-conditioning systems reduce energy consumption?

This paper has discussed different types of solar-driven air-conditioning systems that can serve as an alternative to reduce the energy consumption of conventional electrical driven air-conditioning systems. There are commercially available systems and systems that are limited to lab scale.
