## Overview

---

Will Tesla build a grid-scale battery energy storage station in China?

Tesla has officially signed a ¥4 billion (C\$764/US\$557 million) deal to build its first grid-scale battery energy storage station in China, leveraging its Megapack technology.

How big will energy storage be in 2025?

BloombergNEF forecasts a record 94 GW (247 GWh) of utility-scale storage in 2025—a 35% rise—driven by China’s storage mandates. US tariffs, policy shifts and LFP dominance will drive growth to 220 GW/972 GWh by 2035. The global energy storage sector is on track for another record year in 2025 as utility-scale projects expand into new regions.

Why is battery energy storage important in 2022?

As the world transitions to greener sources of power generation such as solar PV and wind, battery energy storage developments will be critical in meeting future energy demand. Global BESS capacity additions expanded 60% in 2022 over the previous year, with total new installations exceeding 43 GWh.

What is a battery energy storage system?

Battery energy storage systems (BESS) are a configuration of interconnected batteries designed to store a surplus of electrical energy and release it for upcoming demand. Consequently, BESS offers practical solutions for addressing power intermittency challenges.
