

High-efficiency mobile energy storage containers used in mountainous areas

Overview

To adapt to the complex terrain of mountainous areas, the energy storage container adopts a modular split design, which can be disassembled into three independent units, transported to the mountaintop by helicopter or mule and horse, and then assembled on site. How can a mobile energy storage system help a construction site?

Integrate solar, storage, and charging stations to provide more green and low-carbon energy. On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions.

What is a mobile energy storage system?

On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions. Maximum safety utilizing the safe type of LFP battery (LiFePO₄) combined with an intelligent 3-level battery management system (BMS);.
