

# **Household uninterruptible power supply box with large capacity**

## Overview

---

What is a home UPS (uninterruptible power supply)?

Our Home UPS (Uninterruptible Power Supply) is a reliable device designed to provide continuous power to household appliances during electricity interruptions. It seamlessly switches to battery power, ensuring a stable and uninterrupted power supply for essential devices such as computers, routers, and home electronics.

What is an uninterruptible combined UPS system?

The uninterruptible combined UPS units include an economical 24 V DC switched mode power supply with an integrated charge and control unit for optimal battery management. These space-saving combined UPS systems control and monitor the connected battery modules, providing early warnings when battery life expectancy is low.

What is a capacitive ups based on ultracapacitors?

The capacitive UPS based on ultracapacitors provide the highest level of system availability in the field of 24 V DC uninterruptible power supplies. With a broad portfolio designed for various requirements and applications, they ensure uninterrupted power supply with currents of up to 40 A in the event of a power failure.

How big is a ups & how does it work?

The compact size (just 12.2 inches wide and 3.1 inches tall) fits nicely under our desk without taking up valuable space. What sets this UPS apart is the Eco Mode feature. When our computer went to sleep, it automatically cut power to designated outlets, reducing standby power consumption.
