

How big a solar panel should be installed on a 9 square meter roof

Overview

How many solar panels can fit on a roof?

To calculate how many panels you can fit on your roof, start by determining the total area of your rooftop that's suitable for solar installation. Subtract any areas that are not usable due to obstructions like chimneys, vents, or shaded regions. With the usable space in mind, consider the size of the solar panels you are interested in.

How much space do solar panels need?

SolarTech's regional production data helps hit that sweet spot for maximum value and performance. Each solar panel requires approximately 17-20 square feet of roof space, including necessary spacing for installation and maintenance. A typical 20-panel system needs 340-400 square feet of unshaded roof area.
