

How many solar panels are there on a roof

Overview

How many solar panels can fit on my roof?

The most obvious factor in determining how many solar panels can fit on your roof will of course be the size of your roof, and whether you are able to utilise all of that space. Chimneys, skylights and roof windows can get in the way, thus decreasing the available space.

How much space does a solar panel take up?

However, if you insist on working this out yourself, you can use the following figure for a typical solar panel that we'd fit on our customer's roofs - 1722 x 1134 x 30 (a single panel would take up 1.95 m² of roof space).

How many panels can be installed on a roof?

In this computation, each panel takes up about 1.239-1.44 sq. m of space. Hence, you can set up a maximum of 12 to 15 panels for a 19.72 sq. m of roof space. You need to round your number lower instead of higher if your computations do not result in a whole number.

Can a roof be used for solar panels?

Start by measuring the length and width of your roof to get the overall square footage. However, the entire roof surface may not be suitable for solar panel installation. Obstacles such as chimneys, vents, and skylights reduce the usable area.
